

Clave 2: Familias y géneros

	Clave 2: Familias y géneros										
											<u>Compuestas</u>
											<i>Chamomilla recutita</i>
											<i>Tanacetum</i>
											<i>Leucanthemum vulgare</i>
											<i>Anacyclus clavatus</i>
											<i>Anthemis</i>
											<i>Bellis</i>
											
											<u>Compuestas</u>
											<i>Ditrichia graveolans</i>
											<i>Senecio</i>

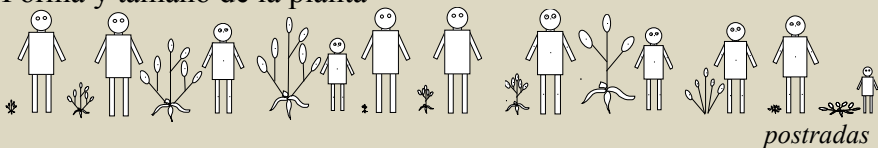

El primer símbolo es el tipo de flor, en este caso flor de mediano tamaño, color blanco y numerosos pétalos que nos conduce a las compuestas. El siguiente indica el tipo de sépalos, a su derecha un tipo de flor sin escamas, ni pelos entre las flores apétalas, la forma del capítulo, la distribución de las flores, tamaño, la hoja y finalmente la flor nos conducen a chamomilla recutita. La siguiente especie tanacetum comparte los tres primeros símbolos pero cambia el cuarto: la forma del capítulo. Leucanthemum comparte con las anteriores cuatro símbolos pero cambia el quinto. Bellis solo comparte con las anteriores el primer símbolo, el tipo de flor, todos los demás son propios del género.

Por lo tanto los símbolos corresponden también a las siguientes especies hasta que la raya negra horizontal indica un cambio.

Símbolos

Los símbolos son muy visuales y sencillos de entender a simple vista, estos son algunos ejemplos.

Forma y tamaño de la planta

rastreras trepadoras bulbos rizomas arbustos árboles

Distribución de las flores en la planta

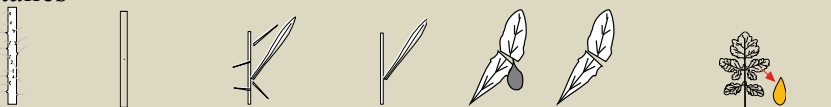

Frutos

sección plana redondeada dehiscente no dehiscente 4-6-8...valvas cariofiláceas

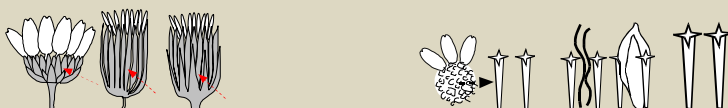

Detalles

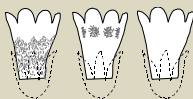

pelosa sin pelos pinchos sin pinchos látex sin látex látex amarillo

Flores

tipos de sépalos con pelos, escamas o sin ellos entre flores centrales sin ellos

con pelos o sin ellos en interior flores

acuáticas
